Technical Skills

- Programming: Python
- Data Analytics & Visualization: Pandas, NumPy, Matplotlib, Advanced Excel
- Database & Querying: SQL
- Statistical Analysis: SAS, SPSS

Business & Professional Skills

- Business Planning & Analysis
- Management Reporting & Decision Support
- Process Improvement & Cost Classification
- Project Planning & Execution
- Cross-functional Collaboration

Work Experience

Business Planning & Analysis Specialist

Taiwan Rolling Stock Co. (Manufacturer of railway vehicles and components) 2013/08 – 2025/09

- Conducted user interviews to understand reporting requirements and designed a structured data framework for a business with annual revenue of NT$200-400 million. Developed a semi-automated reporting process using Excel PivotTables and formulas to support data entry and performance reporting, reducing report preparation time from at least one week to one day.
- Conducted cross-functional interviews to identify cost-generating activities, then designed and implemented a standardized cost classification framework in the company's ERP system. Embedded the classification into the procurement process, enabling structured cost data collection and monthly analysis for projects ranging from NT$20 million to NT$3 billion, providing earlier visibility into project spending and supporting ongoing cost control.
- Consolidated cost data for large-scale government tenders worth approximately NT$6 billion, supporting bid pricing, project budget planning, and analysis of projected revenue and gross margin.
- Compiled business performance data and revenue and gross margin forecasts into senior management reports, supporting financial planning and board-level reporting.

Statistical Analyst

Ministry of Health and Welfare (Taiwan Government Agency) 2009/03 – 2013/07

- Extracted, cleaned and transformed datasets using SAS, including outlier handling and derived variable creation, to prepare data for statistical analysis.
- Conducted descriptive and inferential statistical analysis, including hypothesis testing and regression analysis, to support public health policy and operational decisions.
- Communicated statistical findings and metric definitions to support interpretation and reporting.

Selective Projects

Village-level Voting Pattern Similarity Analysis

Python, SQL, SQLite, Pandas, NumPy, Gradio

- Created a village-level database using Pandas and SQLite from public election data.
- Calculated cosine similarity between village-level voting distributions using NumPy.
- Built a Gradio application that allows users to explore villages with similar voting patterns.
